

## LAB 2- create Linux Machine on AWS

I have created instances and security groups already done, permissions SSH / HTTP and HTTPS.

## Generate Key;

## Instance running...

The screenshot shows the AWS Management Console interface. At the top, there's a navigation bar with the AWS logo and search bar. Below it, the 'Instâncias' (Instances) page is displayed. A table lists several instances, with 'Ec2-Lab2-Integrate' selected. The detailed view for this instance shows the following information:

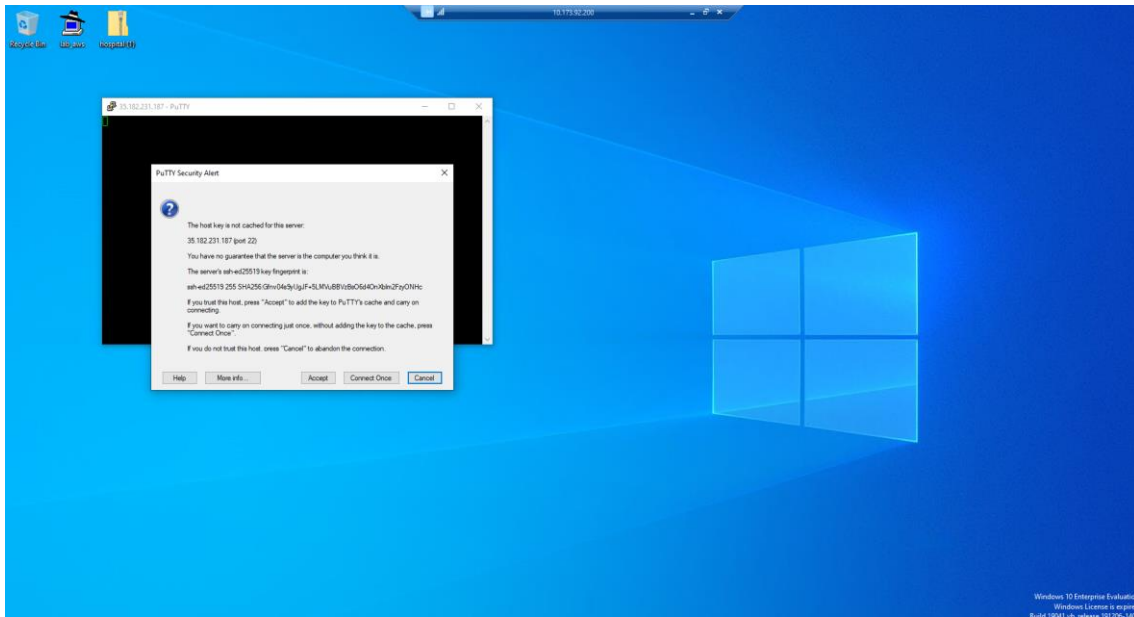

Category	Value
ID da instância	i-093f3b3c70348459 (Ec2-Lab2-Integrate)
Endereço IPv4 público	35.182.231.187 [endereço aberto]
Estado da instância	Pendente
Nome do DNS de IP privado (somente IPv4)	ip-172-31-4-165.ca-central-1.compute.internal
Nome da VPC	vpc-0fa1b41e0035bbf14
Endereço IPv4 privado	172.31.4.165
DNS IPv4 público	ec2-35-182-231-187.ca-central-1.compute.amazonaws.com [endereço aberto]
Endereços IP elásticos	-

## Task 2

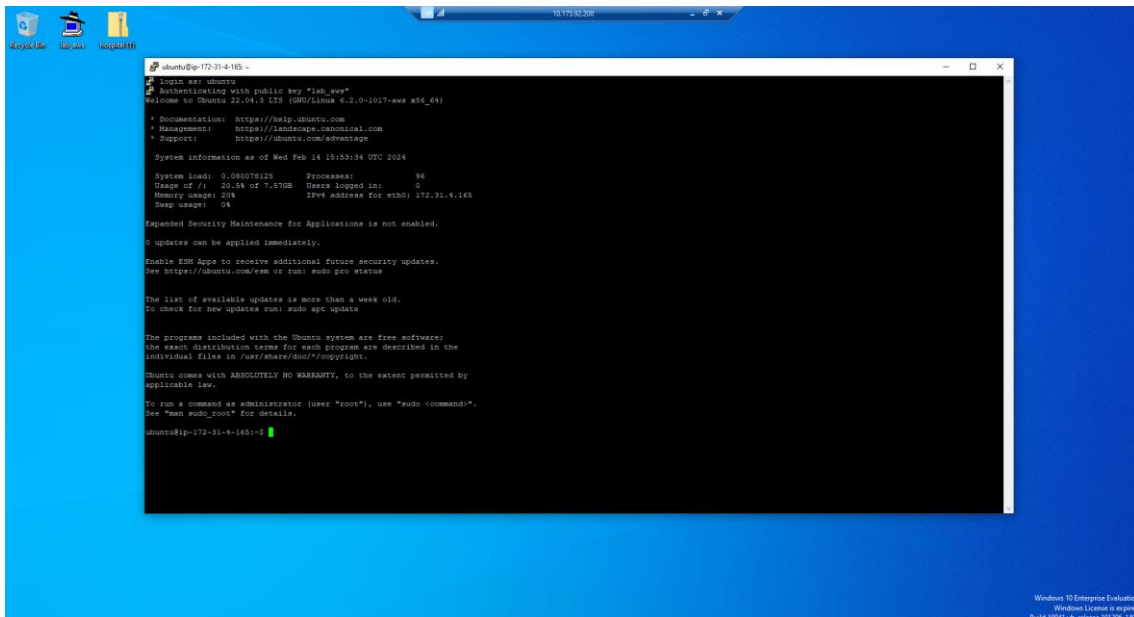

Accessing VSphere by RDP. Its my subnet.

The screenshot shows a Windows 10 desktop environment with a blue background. A 'PuTTY Configuration' dialog box is open in the center, showing the 'Session' category. The 'Host Name (or IP address)' field is set to '172.31.4.165'. The 'Connection type' is set to 'SSH'. The 'Close window on exit' option is set to 'Always'. The dialog box has several tabs and sections, including 'Session', 'Terminal', 'Keyboard', 'Features', 'Window', 'Appearance', 'Behaviour', 'Transition', 'Selection', 'Colour', 'Connection', 'Data', 'Proxy', 'SSH', 'Serial', 'Telnet', 'Plugin', and 'SFTP/SCP'. The 'About' and 'Help' buttons are visible at the bottom of the dialog box.

## Connecting on Instance Ec2.

## In console

```

```

In this step, I'm able to see apache2 working in my ec2-instance. I have allow permission to security group to access Port 80 and 443. Its reason to able to access.

Q5 - So, we need edit file, including commands. But if no package is installed when running the line, it crashes., so it's a reason to install php-mysql to work instructions in file configurations. After that we need restart the service because, the file need to reading command again for validation, and update service.

```
